Letters TO THE EDITOR

Pain-free skiing

It has been my practice, through my many years on Earth, to readily share any product or service that treats me well with others who can also benefit.

Between age and many days of skiing, my knees are about trashed. My Vail knee doctor, after doing all humanly possible to find a way for me to ski without pain, suggested I call Walter Dandy, the inventor of CADS, and give his ("remarkable" I can now say) devices a try.

Wow! After the first two turns on tryout day, I quickly realized that the only element of my skiing I gave up was the pain! I ski at least as well as before, with my knees feeling that they're on some sedentary vacation. And it's been 12 days of use so far. Simply fantastic.

Throughout those 12 days, I must have answered 100 queries as to just what the devices connecting my ski boots to my rear end were. And, of course, did they work? Happily I gave them the cads.com Web site.

Walter, the CADS inventor and sole marketer, does his best to spread the word on his remarkable invention, but he operates alone. It puzzles me why Vail Resorts isn't all over this product as a device to bring many former skiers with limiting knee and leg, or even weight ailments, back to skiing. My marketing sense says that there are many Baby Boomers out there who once skied but whose bad knees forced them to abandon the sport. And most of them are potential destination skiers, with families. That's a load of lodging, meals and

lift tickets.

And, of course, the fact that CADS, rather indigenous to Vail as they are, could bring these many ex-skiers' back to the sport at Vail Mountain!

But anyway, if any of you readers find interest in removing pain as an element in your skiing, catch up with Walter Dandy and try his CADS. It's can't-miss move.
